

Erosion control woven geotextile

CocoRoll+

Application- uses of Coir Geo-textiles

Coir Geotextiles **protect land surface and promote quick vegetation**. Geotextiles are a wonderful treasure of natural eco-friendly. Totally biodegradable, geotextiles help soil stabilisation and renew vegetation in varying slopes.

This strong and durable erosion control mat is made from 100% natural and biodegradable coir and is designed for **use on steep slopes or heavy-duty channels**. Once installed, these coir mats offer a high level of erosion control for your location, allowing you to establish natural vegetation.

Why Is Erosion Control Important? Without erosion control, your topsoil may lose its ability to hold nutrients, regulate water flow, and combat pollutants. In addition to affecting the ecosystem of nearby wildlife, residential properties and transportation systems can suffer long term damage.
